

Agriculture Wireless Solutions

Clean, safe water is the lifeblood of our planet. Demand has never been greater. Improving productivity and efficiency depends on access to secure, real time information. But, like water itself...in order for any of this data to be useful and actionable information, it must be captured and processed. Reliably and consistently.

Water/Wastewater systems face exceptional hurdles in accessing the vital data available due to an aging infrastructure, longer distances and challenging terrain.

ESTeem Industrial Wireless Solutions have been successfully deployed in the Agriculture industry for more than 30 years. **ESTeem's** ruggedized, industrial wireless modems are built to be an essential component of the Agriculture communications infrastructure. **ESTeem** provides unsurpassed speed and range to deliver the reliable, isolated and secure wireless networks required today to provide complete connectivity to critical IT, operations control systems and remote asset data. Scalable, redundant wireless networking over large geographical areas become a reality using **ESTeem's IndustrialMESH** technology.
